Epics & User Stories Reference Table

Full backlog reference — Digital Gift Card & Loyalty Point Exchange (Problem Statement #34).

ID	Story Title	User Story	Priority	Points
Epic 1: Merchant Account Linking & Wallet Aggregation				
1.1	Link Merchant Account	As an account holder, I want to link one or more merchant loyalty accounts to my wallet, so that I can manage all my points from a single place.	High	5
1.2	Aggregated Points Balance View	As an account holder, I want to see my aggregated point balance across all linked merchants, so that I know my total available points at a glance.	High	3
1.3	Invalid Credentials Error Handling	As an account holder, I want to see an error if my merchant credentials are invalid, so that I know a linking attempt failed and no incorrect balance is added.	Medium	2
1.4	Merchant Loyalty Program Management	As a merchant partner, I want to manage my loyalty program settings, so that I can control how points are issued to account holders.	Medium	8
Epic 2: Loyalty Point Conversion				
2.1	Convert Points to Exchange Credits	As an account holder, I want to convert my loyalty points into universal exchange credits, so that I can use them across any participating merchant.	High	8
2.2	Validate Points Against Merchant Ledger	As an account holder, I want my submitted points validated against the originating merchant's active ledger before conversion, so that expired, already-redeemed, or unverified points are rejected.	High	5
2.3	Display & Confirm Conversion Rate	As an account holder, I want to see the current conversion rate and confirm it before converting, so that I know exactly how many credits I'll receive.	Medium	3
Epic 3: Gift Card Voucher Redemption				
3.1	Redeem Exchange Credits for Gift Card	As an account holder, I want to redeem my exchange credits for a digital gift card voucher at a chosen merchant and denomination, so that I can spend my points as a gift card.	High	8
3.2	Voucher Checksum & Immediate Lock	As an account holder, I want my generated voucher to include a cryptographic checksum and be locked immediately, so that it cannot be redeemed more than once.	High	5
3.3	Insufficient Balance Handling	As an account holder, I want to see an 'Insufficient Balance' message with my current	Medium	3

ID	Story Title	User Story	Priority	Points
		balance if I don't have enough credits, so that I can convert more points or pick a smaller denomination.		
3.4	Redemption Confirmation Notification	As an account holder, I want a confirmation notification with my voucher code after successful redemption, so that I have a record of my transaction.	Low	2
Epic 4: Merchant Voucher Validation				
4.1	Merchant Voucher Validation	As a merchant partner, I want to validate a presented voucher code against the platform ledger, so that I only honor vouchers that are valid, unused, and unexpired.	High	5
4.2	Sub-250ms Validation Response	As a merchant partner, I want voucher validation to return a Valid/Invalid result within 250ms, so that checkout isn't delayed for the customer.	Medium	5
4.3	Failed Validation Attempt Logging	As a merchant partner, I want failed validation attempts logged with a timestamp and merchant ID, so that suspicious activity can be reviewed for fraud.	Medium	3
Epic 5: Platform Security & Performance				
5.1	Encrypt Data In Transit & At Rest	As an account holder, I want all my loyalty, voucher, and transaction data encrypted in transit and at rest, so that my financial information stays protected from breaches.	High	8
5.2	Sub-250ms Conversion & Redemption Under Load	As an account holder, I want point conversion and redemption to complete in under 250ms even during peak load, so that I don't experience delays or ledger errors.	High	8
